PROFESSIONAL SUMMARY

Mid-senior Fullstack Developer with 5+ years of Django expertise, delivering robust web applications and scalable backend systems. Proven track record in optimizing database performance (40% faster queries) and implementing secure payment/authorization systems with 99.9% uptime. Skilled in Django REST Framework, PostgreSQL, React, Vue.js; known for driving performance improvements and technical leadership in agile teams.

EXPERIENCE

Fullstack Developer – Pink Zebra

Mar 2025 – Present | Remote

- Built RESTful API endpoints with Django REST Framework for an eco-friendly fragrance platform, seamlessly integrating with a Vue.js frontend to enable real-time product browsing and ordering.
- Optimized database queries using Django ORM, reducing average query time by 40% and improving overall platform performance.
- Collaborated with an agile team of 5 developers, managing code reviews and CI/CD pipelines to deploy updates to Azure with 99.9% uptime.
- Implemented backend user permission and authorization systems to secure API access and protect sensitive data.
- Integrated frontend session storage cache to persist payment data, improving checkout reliability and reducing cart abandonment.
- Optimized product pagination on the backend to enhance data retrieval performance and reduce server load during high-traffic periods.

Fullstack Developer – Nitza Development

Sep 2024 – Present | United States

- Architected and optimized the backend infrastructure for TowithHouston (U.S. trailer rental & sales), utilizing Django and PostgreSQL to handle complex inventory and rental logic.
- Engineered a custom Django Admin Panel, streamlining internal workflows for inventory management and sales tracking, which improved administrative efficiency.
- Significantly reduced query response times and server load by refactoring legacy code and implementing advanced database optimization techniques, identified via Django Debug Toolbar.
- Enhanced database performance through strategic indexing and query optimization (select_related and prefetch_related), ensuring high availability during peak traffic.
- Executed frontend enhancements using Bootstrap 5, ensuring a responsive, user-centric design and seamless integration with backend RESTful services.

Fullstack Developer (Freelancer) – Private Client

Jan 2024 – Jul 2024 | Dominican Republic

- Engineered a high-performance media platform using Django REST Framework (DRF) and JavaScript and Tailwind CSS, enabling seamless real-time video streaming and interactive user experiences.
- Integrated Agora SDK to power low-latency live streaming capabilities, complemented by a real-time engagement system for community interactions.
- Optimized asset delivery and video playback by implementing Cloudinary, significantly reducing buffering times and improving global content availability.
- Architected a dynamic frontend using AJAX and Bootstrap 5, creating a responsive interface with pagination for video navigation and commenting.

Fullstack Developer (Freelancer) – TDMeat

Jun 2023 – Oct 2023 | United States

- Designed and developed a full-stack food management platform using React (Hooks), Django, and PostgreSQL, streamlining operations from inventory management to delivery tracking.
- Implemented secure payment processing and order management system, enabling real-time customer transactions and reducing processing time by 35%.
- Built role-based dashboards for butcher, seller, and delivery staff, improving operational productivity by 40%.
- Managed full deployment lifecycle using PythonAnywhere server and Linux terminal, including automated testing and production setup.

EDUCATION

Bachelor's Degree in Computer Science

SKILLS

Backend: Python, Django, Django REST Framework, Celery

Frontend: JavaScript, React, Vue, Bootstrap 5, Tailwind CSS

Databases: MySQL, PostgreSQL, Redis

Tools & DevOps: Microsoft Teams, Docker, Git, Linux, Azure, CI/CD
